A **refraction** is an eye test that measures a person's prescription for eyeglasses or contact lenses. It is considered a non-covered service by many insurance companies, making it the patient's responsibility. If a refraction is performed during the course of the eye exam, ***and a glasses prescription is given***, you will be charged \$35.

I acknowledge that I have received notification and understand that should a refraction be performed and a glasses prescription given, it is my responsibility to pay the \$35 charge at the time of check out.
